secuENTRY AbFeWo

A PLEASANT START TO THE HOLIDAY

An increasing number of people are renting out their house or holiday home. The large internet based booking sites are experiencing a true boom. Letting out a property is worthwhile - apart from the inconvenience of handing over the key...

Who can afford a caretaker for their holiday home? BURG-WÄCHTER has the perfect solution. Special in-house developed software for holiday homes can be combined with secuENTRY cylinders, allowing landlords to grant temporary access rights to their guests from the comfort of their own home. The benefit: Neither the landlord nor the caretaker have to be on site. It is also not necessary to synchronise the software and the door cylinder.

The six-digit code generated by the secuENTRY 7094 AbFeWo software contains the validity period. The code is communicated to the guest at the start of the holiday and entered on the secuENTRY keypad at the destination.

The door cylinder recognises the code and opens the door to the holiday retreat. Cleaning or technical staff are given permanent access through a code or transponder.

Extra convenient: The code for the holidaymaker is simply sent by SMS, whatsapp, e-mail and many other communication systems. The "handing over of the key" is now practical and time-saving, for both the landlord and the holidaymaker.

AbFeWo is compatible with the secuENTRY models pro 7100 and pro 7116 DUO electronic door cylinders. The door is opened after entering the code on the secuENTRY pro 5711 PIN keypad.

Another plus point: Thanks to the wireless connection, there is no need for drilling or cable routing

A completely relaxed start to the holiday. secuENTRY AbFeWo software from BURG-WÄCHTER makes the inconvenient job of handing over keys a thing of the past. The door to the holiday house or apartment is opened with a six-digit code.

AbFeWo Software: It couldn't be more user friendly.

- Six-digit code with defined validity period
- Code generated at home and can be used world-wide
- No manager necessary
- No synchronisation necessary (e.g. over the internet)
- Can be used for up to 8 doors;
- even in the case of several dwelling or common doors (main door to multiple residency buildings).
- Up to 15 different users
- Secure code generation by means of a special algorithm
- Guest-code is automatically invalid on expiry
