BURGprotect™

SECURITY

CONVENIENCE

CONTROL

What drives us is your everyday security!

The BURGprotect™ Smart Home system sounds an alarm in the event of break-ins and fire and water damage. During product development, we placed particular importance on convenience. You can install all the components in just a few steps. You can expand the alarm system at any time and adapt it to a new home environment. So that you will always have everything under control, even on the go.

This is how BURGprotect™ works

Base 2200: Control centre & alarm siren all in one.

The Base 2200 central control unit is the centrepiece of BURGprotect™. All Smart Home components are connected to the alarm control unit. This happens in no time at all – or more precisely, at the touch of a button. You just scan the printed QR code with your smartphone. And the motion detector, window contact and smoke detector are registered, and your alarm system is ready to go. It couldn't be simpler and faster!

The Base 2200 is the centrepiece of our Smart Home system. The control centre manages all the BURGprotect™ sensors and also works as an alarm siren.

If uninvited guests want to get into your house, smoke development is detected or a window is opened, the Base 2200 will let you know in a matter of seconds via a push message on your smartphone. At the same time, the unit will trigger an alarm of up to 100 decibels. Only an internet connection is required to use the system. Advantage: The control unit has three possible alarm channels: LAN, WLAN (WiFi) or GSM (SIM card). In addition, the Base 2200 is protected against jammers.

A strong team.

Starter package Set 2210 – your ideal entry into the world of Smart Home! With the Base alarm control centre, two contact detectors, a movement detector, a remote control and the free smartphone app, you will significantly increase the security of your home.

BURGprotect™ offers endless possibilities for your personal Smart Home. An alarm control centre, different sensors and components – this is the key principle of BURGprotect™.

The Starter Pack Set 2210 has proven successful. Included in it are the Base alarm control centre, two Contact 2031 door/window contacts, a Motion 2010 motion detector

and the Control 2110 remote control. With the Starter Pack Set 2210, you can safeguard many areas of your home. With the movement detector, you monitor the living room, for example, and the contact detector responds to undesirable movements at patio windows or the front door. The handy remote control can arm or deactivate your Smart Home at the touch of a button. For all those who don't always have their smartphone on hand.

Everything from one source.

Everything in sight, everything under control: with the free BURGprotect™ app for iOS and Android, you link all the Smart Home components to the Base control unit. Managing the devices via the BURGprotect™ app is clear and simple – no matter whether you install 5, 50, or 200 sensors, such as a movement detector, alarm siren or smoke detector. Normal IT users can also manage it. Intuitive and user-friendly operation was the top priority when the app was developed!

No matter where you are, with the app you can arm the alarm system or unlock it. A false alarm is prevented by using the time delay of the Coming Home and Leaving Home function. Sophisticated features such as the scenario control of the Plug 2141 wireless remote socket will deter intruders. Lamps and TVs are switched on and off as if you were at home.

With the Home function, previously defined sensors remain active. For example, your garage or patio is monitored even when you are home. The Smoke 2050 smoke detector and Water 2060 water detector warn around the clock against possible property damage, for example by a smoking oven or overflowing washing machine.

No matter where you are: With the BURGprotect™ app, you can arm the alarm system or deactivate it. The scenario function of the Plug wireless remote socket is also controlled via the app. By integrating BURGcam cameras into the app, you can check on potential alarms right away.

Tip: With the BURGprotect™ app, you can also add WLAN cameras from the BURGcam series. Look at your smartphone to see if everything is okay at home.

For more information on the BURGcam, please request or visit www.burg.biz

Free for iOS and Android: you can download the BURGprotect™ app at your particular store.

Your secure Smart Home.

Front door, windows, living room, patio, bedrooms:

Find out which BURGprotect™ sensor is used where. From the siren at the front door to the contact detector on the window to the smoke detector in the living room and bedrooms.

Remote control

With the handy Control 2110, easily control the most important functions of BURGprotect™ with the touch of a button.

Control panel

If your smartphone isn't handy, take over control of BURGprotect™ with Keypad 2100. Installing the wall mount next to the front door has proven to be effective.

Water detector

An incident of water damage occurs every 30 seconds in Germany. The Water 2060 sensor detects water penetration and water overflow (washing machine).

Vibration detector

Distinctive vibrations result when windows or doors are pried open. The Vibrancy 2020 sensor registers them and sounds the alarm.

Wireless remote socket

Make it look like someone is home. The Plug 2141 socket insert lets you switch on TVs or lamps and simulate your presence. In addition, the socket insert measures how much electricity the connected appliance uses.

Smoke detector

Fire is the horror scenario in your own home. The Smoke 2050 sensor warns with an alarm of up to 85 decibels when there is intensive smoke development.

Indoor siren

The Indoor Siren Noise 2160 transmits the alarm to other floors or removes convenient rooms. The siren is battery-powered and does not need to be plugged in.

PIR motion detector

If uninvited guests are in the house, they will be detected by the Sensor Motion 2010. This will result in Alarm signal and push notification.

Contact detectors

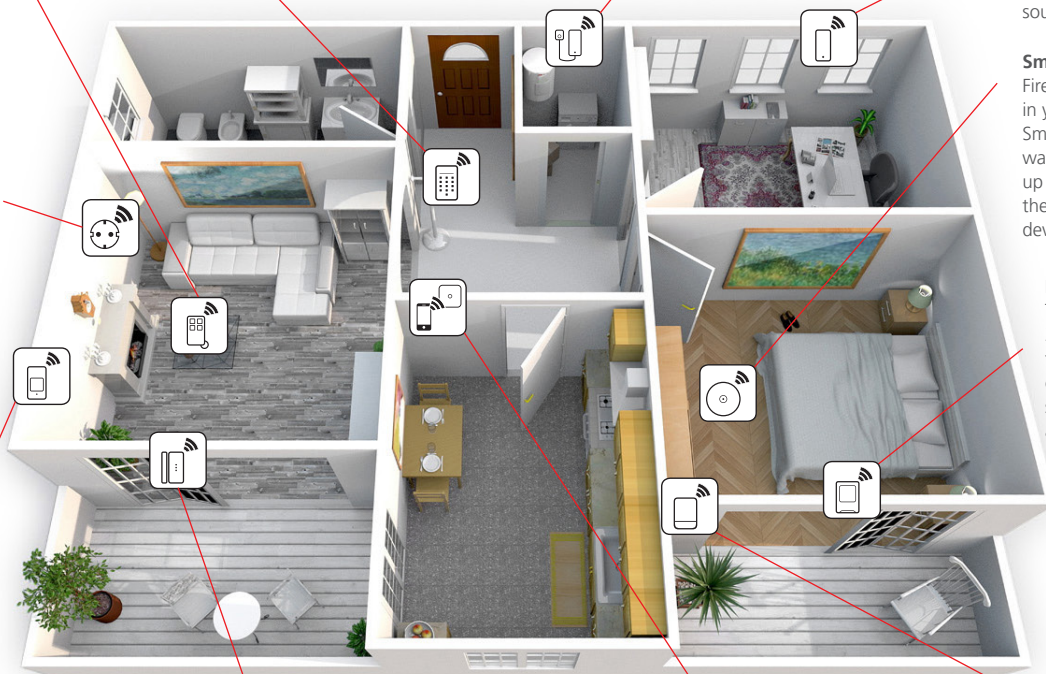

If intruders pry open windows or a door, the magnetic connection on the Contact 2031 sensor will be broken. The alarm will sound and you will receive a push message.

Alarm control centre

The Base control unit is the centrepiece of BURGprotect™ and at the same time an alarm unit with a maximum of 100 decibels.

Alarm siren

Very visibly mounted, an alarm siren will deter potential intruders. At the same time, the Outdoor Siren 2151 will sound the alarm with a maximum of 120 decibels in an emergency.

The BURGprotect™ product world.

Starter Set 2210

- Perfect starter set for your home
- Set consists of: 1x Base, 2x Contact, 1x Motion, 1x Control
- Safeguarding windows and doors, the motion detector detects intruders
- Free app for iOS and Android

Control 2110

- Handy remote control
- Alarm system on/off, home scenario on/off
- SOS panic function (contact persons are alerted)

Motion 2010

- Passive infrared detector
- Coverage approx. 110 degrees
- Fewer false alarms due to small animal recognition
- Includes holder with ball joint for optimal adjustment

Noise 2160

- Acoustic and visual alarm up to 80 dB
- Application for indoor use
- Manipulation protection
- Up to 18 months battery life

Contact 2031

- Contact detector, alarm when windows or doors are opened
- Easy installation without screws
- Wide reach
- Status inquiry (on/off)

Base 2200*

- Central control unit with integrated siren (max. 100 dB)
- Emergency power battery, manipulation protection
- Easy sensor integration using QR code

(*Only available in starter set 2210)

Water 2060

- Water detector, alarm when water level is too high
- Can be used to detect water penetration and overflow
- Signal when battery is low

Vibrancy 2020

- Vibration alarm
- Versatile use (window panes, furniture, display cases)
- Easy installation without screws

Continued on next page.

Continued from previous page.

Smoke 2050

- Alarm of up to 85 dB in case of strong smoke development
- Can also be used without app
- Signal when battery is low
- EN 14604: 2005

Sirene 2151

- Visual and acoustic alarm signal up to 120 dB
- Deterrence thanks to visible exterior installation
- Emergency power battery, manipulation protection
- Up to 36 months standby

Keypad 2100

- Remote control with touch operating keys for wall installation
- Alarm system on/off, home scenario on/off, SOS panic function (contact persons are alerted)
- LED display of alarm status

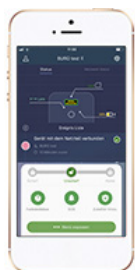

Plug 2141

- Socket insert up to 2,300 watts
- Can be switched manually or via app
- Can be controlled manually or based on scenario (lamp, television)
- Measures electricity use

BURGprotect™ App

- Free app for iOS and Android
- Secure thanks to 256 bit encryption
- Intuitive set-up of alarm system
- Convenient user management
